PVC-U SCHEDULE 40 & 80 PIPES

MATERIAL

Rigid PVC Poly (Vinyl chloride) used in the manufacturing of PVC Sch 80 Solvent Weld Plain End Pressure Pipes certified to NSF/ANSI 372 and confirms with the lead content requirements for "lead free" plumbing. The compound is listed with NSF for potable water service.

EXTRUDED PIPE

Extruded PVC Schedule 80 Solvent Weld Plain End Pressure Pipes conforms and tested to the following standards:

- 1) ANSI/NSF 61 "Drinking Water Systems Components- Health Effects"
- 2) ASTM D1785 "Standard Specification for Poly (Vinyl chloride) (PVC) Plastic Pipe, Schedules 40,80, and 120"
- 3) Annex C- Method for the determination of impact resistance at 20°C for Type 1 stated in MS 628-2:2014 "Plastic piping systems for water supply and for buried and above-ground drainage and sewerage under pressure- Unplasticized poly (vinyl chloride) (PVC-U)- Part 2: Pipes.

PVC-U SCHEDULE 40 & 80 PIPES

Standards & Quality

Sch. 40 & 80 pipes are manufactured to comply with NSF Standard 61, CSA B 137.3 and ASTM D1785, consistently meeting the Quality Assurance test requirements of the standard with regards to burst pressure, flattening and extrusion quality.

Applications

Sch. 40 & 80 pipes are resistant to most acids, alkalis, salts, fats, oxidants and halogens. However, those pipes should not be used with ester, ketones, ethers and aromatic or chlorinated hydrocarbons.

Typical applications include:

- ▶ chemical processing ▶ process piping (WTP/WWTP/STP)
- ▶ agricultural ▶ cooling water
- ▶ potable water ▶ irrigation

Temperature Consideration

Being a thermoplastic material, Sch. 40 & 80 pipes will display variations in their physical properties as the temperature changes. As the temperature falls, the pipe's stiffness and tensile strength increase, thereby increasing the pipe's pressure capacity. Conversely, as the operating temperature rises, the pipe decreases in stiffness and tensile strength; consequently, the pressure capacity of the pipe will be reduced. With the drop in temperature, the pipes decrease in impact strength and become less ductile. As the temperature rises, the impact strength and flexibility of the pipe increase.

Thermal Linear Expansion

Sch. 40 & 80 pipes expand and contract with change in temperature. The coefficient of thermal expansion is 7×10^{-5} mm/mm/ $^{\circ}\text{C}$. This is equivalent to 7mm change in length for every 10 meters for every 10°C change in temperature.

Pressure

The pressure ratings given are for operating temperature of water at 73°F (23°C). For operating temperature above 73°F (23°C), the working pressure has to be de-rated by multiplying the working pressure of the selected pipe at 73°F (23°C), by the appropriate de-rating factor to determine the maximum permissible working pressure of the pipe at the elevated temperature chosen. Nevertheless, the pipes should not be used at temperature in excess of 140°F (60°C).

| OPERATING F° | TEMP C° | DE-RATING FACTOR |

| 73 | 23 | 1.00 |

PVC-U SCH. 40 & 80 PIPES BENEFITS

Chemical resistance:

The pipes have excellent chemical resistance which allows the transportation of many acids, alkalis and chemical concentrates without fear of corrosion and environmental pollution.

Abrasion resistance:

The pipes offer good resistance to abrasion and erosion from aggressive slurries, which can rapidly damage steel or other traditional pipe materials.

Smooth bore:

The exceptionally smooth bore results in low friction head losses and also inhibits the formation of scale, with consequent savings in pump energy consumption and reduced pressure drops.

Light weight:

At 5 times lighter than steel pipe, Sch. 40 and 80 pipes are much easier to handle, especially during installation at site.

Easy to join:

Solvent welding gives fast and trouble-free installation and allows simple modifications to existing systems.
